# Inventory of Industry documents

A report on the type of information from the EU-CEG system on enhanced reporting of priority additives

> Circulation: Public Authors: RIVM, CSJA Date: 26 June 2019 Doc. Ref. N°: D9.2

This activity has received funding from the European Union's Health Program (2014-2020) under grant agreement – 761297.

The content of this publication represents the views of the author only and is his/her sole responsibility; it cannot be considered to reflect the views of the European Commission and/or the Consumers, Health, Agriculture and Food Executive Agency or any other body of the European Union. The European Commission and the Agency do not accept any responsibility for use that may be made of the information it contains.

## **Table of Contents**

Background	. 3
Manufacturers that submitted reports on priority additives	
Content of Enhanced reporting documents	. 3
Use of Priority additives	. 4
References	. 4
ANNEX I - Submitted priority files. Overview of companies that submitted one or multiple docume	nts
regarding each priority additive in the Member States. Content of the files is not taken into acco	unt
in this overview. Companies in black are members of the Priority Additives Tobacco Consorti	um
(PATC), companies in grey are not. Inspection of a selection of documents submitted by compan	iies
outside of the PACT, showed that none of the sampled documents contained relevant data about	the
additive	
ANNEX II	
ANNEX III	13

### **Background**

Manufacturers and importers of cigarettes and RYO tobacco (individual or in consortia) are obliged to submit a report containing comprehensive studies on each priority additive (if used as additive) (Tobacco Product Directive 2014/40/EU Article 6; Commission Implementing Decision EU 2016/787; point 6 and annex 1). These studies should have been submitted by 1 July 2018, 18 months after the additive concerned has been included in the priority list (at 1 January 2017). The reports should be based on studies carried out to examine for each additive whether it contributes to or increases the toxicity and/or addictiveness of cigarettes or RYO tobacco to a significant degree (TPD Art. 6.2). Moreover, studies should be carried out to examine whether the additive results in a characterizing flavour, facilitates inhalation or nicotine uptake or leads to the formation of CMR (carcinogenic, mutagenic, or reprotoxic) properties. Those studies shall also take into account the intended use of the products concerned and examine in particular the emissions resulting from the combustion process involving the additive concerned. The studies shall also examine the interaction of that additive with other ingredients contained in the products concerned (TPD Art 6.3). Submitted studies and reports should be sufficiently comprehensive to allow a reliable assessment of whether an additive can contribute to or significantly increases the toxicity or addictiveness of cigarettes or RYO tobacco.

The Commission and the Member States concerned may require these reports to be peer reviewed by an independent scientific body (TPD art. 6.4). In order to facilitate the peer review of the submitted information, an inventory was made of the type of information submitted for each priority additive and provided in this deliverable.

### Manufacturers that submitted reports on priority additives

Twelve tobacco manufacturers joined forces in a Priority Additives Tobacco Consortium (PATC). Participating companies in this consortium are: British American Tobacco (Investments) Limited, Imperial Tobacco Limited, JT International SA, Joh. Wilh. Von Eicken GmbH, Karelia Tobacco company inc., Landewyck Tobacco s.a., Mac Baren Tobacco Company A/S, Philip Morris Products S.A., Pöschl Tabak GmbH & Co. KG., Scandinavian Tobacco Group A/S., KT&G Corporation, Continental Tobacco). The members of the PATC jointly submitted reports on 14 out of 15 priority additives. Reports for the additive diacetyl were not provided, although several Member States reported to have cigarettes or RYO products containing this additive on their market.

A few manufactures outside of the Consortium have submitted documents on some of the priority additives. Inspection of these documents showed that none of the sampled documents contained relevant data about the additive. However, as these manufacturers are small and medium enterprises, they were exempted from the enhanced reporting obligations for any of the additives that the consortium already provided reports on (TPD Art. 5). See Annex I for an overview of manufacturers that submitted documents on priority additives, and Member States they were submitted to. Note that it is only indicated whether any document was submitted, regardless of the content of the document.

### **Content of Enhanced reporting documents**

The reports delivered by the PATC were submitted in the EU-CEG system in European Member states with products containing the respective additive on the market. They were all in English. All reports of the consortium follow the same structure and count between 2458 and 2717 pages (except for the report on Titanium Dioxide which contains 219 pages). As an example of this common structure, the table of contents of the PATC report on cocoa is provided in Annex II. Although all PATC reports follow the same structure, there are some differences between reports of additives. First, transfer rates were only investigated for nine out of the 14 additives (i.e. cocoa powder, geraniol, glycerol, guaiacol, liquorice extract powder, maltol, menthol, propylene glycol and titanium dioxide). Smoke chemistry and in vitro toxicity tests were conducted for all additives except titanium dioxide. A human clinical study was performed for 10 out of 14 additives (i.e. Carob bean extract, cocoa powder, fenugreek extract, fig juice concentrate, glycerol, guaiacol, liquorice extract powder, menthol, propylene glycol).

Finally, the sensory analysis for characterizing flavor was only conducted for nine out of the 14 additives (i.e. Carob bean extract, cocoa powder, fenugreek extract, fig juice concentrate, geraniol, guaiacol, liquorice extract powder and menthol). Annex III contains the provided overview of the comprehensive testing program of the PATC. For a more detailed and in-depth description of the content of the reports a scientific independent review panel will publish their findings in reports on each priority additive.

### **Use of Priority additives**

Results of the analysis on basic information on the use of priority additives is not available at this stage, but may be obtained from JATC WP 6 at a later time.

### ANNEX II - TABLE OF CONTENTS COCOA REPORT

# Table of Contents

Table of Appendices	
Executive Summary	
1. Rationale for the Report	
2. Study Organization	10
A. Priority Additives Tobacco Consortium	10
B. Test and Reference Cigarette Production	1
C. Independent Contract Research Organisations	1
D. Literature	1
3. Literature	1
A. Literature Review	1
B. Systematic Literature Searches	4
i. Searches and Selection of Studies	4
ii. Study Characteristics	4
iii. Study Findings	5
iv. Overview of study findings	5
v. List of Cocoa Powder References Included by KSR in this Systematic Review:	6
C. Literature Review for Cocoa when Used as Tobacco Additive	7
D. References	9
4. Description and Use of Cocoa	109
A. Background	109
B. Chemical Identity and other Characteristics	110
i. General	110
ii. Lot Specifications	110
iii. Constituents of Relevance of Cocoa	11
5. Study Concept	11
A. Comparative Testing Approach	114
B. Additive Lot	116
C. Additive Concentrations	116
D. Presentation of Results	11
6. Statistics	118
A. Chemical Analysis and in vitro Toxicology of Mainstream Smoke	118
i. General: 3R4F Monitor Cigarette Variability	118
ii. Smoke Chemistry: 3R4F Monitor Cigarette Variability	118
iii. In vitro: 3R4F Monitor Cigarette Variability	120
iv. Overall Assessment of Statistically Significant and Meaningful Effects	122
B. Clinical Study: Pharmacokinetics	123
C. Characterizing Flavour Assessment	12
7. Test and Reference Cigarette Manufacturing	124
8. Study Results	125
A. Transfer into the Smoke	125
B. Pyrolysis Experiments in Literature	126

C.	Chemical Analysis of Mainstream Smoke	127
j	i. Cocoa powder: Single Additive	127
i	ii. Cocoa powder: Mix 3	138
D.	In Vitro Studies	144
i	i. Ames Assay: Single Additive	144
i	ii. Ames Assay: Mix 3	149
i	iii. Neutral Red Uptake Assay: Single Additive	152
i	iv. Neutral Red Uptake Assay: Mix 3	155
,	v. In vitro Micronucleus Assay: Single Additive	157
1	vi. In vitro Micronucleus Assay: Mix 3	160
E.	In Vivo Inhalation Studies in Literature	163
F.	Reproductive Toxicity – Literature Data	164
G.	Characterizing Flavour Analysis	165
Н.	Clinical Study Results – Facilitate Inhalation or Nicotine Uptake	168
i	i. Cocoa powder: Single Additive	168
i	ii. Cocoa powder: Mix 3	175
ı.	Addictiveness Testing	181
9.	Summary and Overall Conclusion	185
10.	Abbreviations and Glossary	192
11	References	105

# ANNEX III - OVERVIEW OF THE COMPREHENSIVE TESTING PROGRAM

Table 1: Overview of the comprehensive testing program.

	30		Smoke chemistry		In-vitro toxicity		Human clinical study	cal study	Sensorial analysis
	Comprehensive literature review	Transfer rates	Who list of 39 priority emissions	Ames	Neutral Red Uptake	In-vitro Microronucleus	Pharmacokinetics study	Smoking behaviour Assessment	Assessment for characterising flavour
Carob bean extract	1	×	1	1	1	1	1	1	1
Cocoa powder	1	1	1	1	1	1	1	1	>
Fenugreek extract	1	×	1	1	1	1	1	7	>
Fig juice concentrate	7	×	1	1	1	1	1	>	>
Geraniol	>	7	1	1	1	1	×	×	>
Glycerol	>	1	1	1	1	*	1	>	×
Guaiacol	>	>	>	1	1	>	>	>	>
Guar Gum	1	×	1	1	1	1	×	×	×
Liquorice extract powder	>	>	1	1	1	>	1	>	>
Maltol	7	>	1	1	1	*	×	×	×
Menthol	>	>	^	1	1	>	>	>	>
Propylene glycol	>	>	1	1	1	>	1	>	×
